

Less Noise, More Sound

S3 Turbo Module

Powerful Ventilation Add-On for Accelero S3

The Boost for your Passive Cooling

The Turbo Module unleashes the full potential of the Accelero S3

Since the beginning of the year with the Accelero S3 there is the solution for all silent enthusiasts who do not want to forego performance. The S3 Turbo Module now unleashes the full potential of the passive graphics card cooler.

The powerful S3 Turbo Module is the ultimate extension for the Accelero S3. A 120 mm ventilation add-on boosts the already excellent cooling capacity from the original 135 up to 200 Watts. This greatly expands the field of application of this cooler and enables the operation with high-performance graphics cards like the R9 280.

Despite the additional air flow the cooler does not at all become a noisy turbine. With a maximum spinning speed of 1,350 RPM the Turbo Module generates a merely 0.25 Sone in operation. That way it significantly increases the potential power of your passive cooling system while it remains almost inaudible.

Great effect, little effort: A simple clip-on design allows the S3 Turbo Module to be easily installed onto your Accelero S3 in a minute.

QUICK FACTS S3 Turbo Module Powerful Ventilation Add-On for Accelero S3

- 120 mm Fan to boost up Accelero S3 cooling performance
- Extremely quiet – 0.25 sone
- Fan with low noise impeller
- Fluid dynamic bearing extends service life

About ARCTIC

As an international company ARCTIC is one of the leading manufacturers of computer cooling and has a profound know-how in the field of consumer electronics. With headquarters in Switzerland and offices in Hong Kong, Germany and the U.S., we sell our products in over 45 countries around the world.
