

Less Noise, More Sound

ARCTIC coolers fully Skylake compatible

Certain CPU coolers may damage Intel's current Skylake processors for socket LGA 1151 - this has just become known. The Background is obviously a too high pressure, which can cause damage.

With this official statement we would like to assure that ARCTIC coolers are not affected by these problems - and thus fully Skylake compatible.

All ARCTIC CPU Coolers complies concerning the released sockets with the mechanical specification from Intel. With our coolers there are no problems on Intel CPUs of the 6th generation (Skylake) for LGA 1151.

Depending on the parcel service drop heights of over 2 m can not be excluded. Therefore we recommend regardless of the CPU used to carefully evaluate the dispatch and the packaging used and to possibly mount larger and heavier CPU coolers by the end user.

About ARCTIC

As an international company ARCTIC is one of the leading manufacturers of computer cooling and has a profound know-how in the field of consumer electronics. With headquarters in Switzerland and offices in Hong Kong, Germany and the U.S., we sell our products in over 45 countries around the world.
